

The background of the entire page is a light-colored, possibly white or light grey, marble with subtle, darker grey veining. At the top center, the brand name 'emmet' is written in a bold, black, sans-serif font. The 'e' is lowercase, while 'm', 'm', 'e', 't' are uppercase. Below the brand name, the tagline 'make it real' is written in a smaller, lowercase, black, sans-serif font, with each letter spaced out.

## WHO WE ARE?

**emmet** is the start point of a unique dialogue between quality and design. With more than 25 years of remarkable experience in manufacturing and trading, **emmet** provides a wide selection of high quality artistic tile and ceramic products. This only happens upon **emmet**'s deep network with renowned and reliable tile manufacturers in Iran; a country, well-known for its history in tile and ceramic industry, and its fame in exporting first-rate products around the world. At **emmet**, we offer you a range of diverse and multipurpose products with the highest standards and richness in aesthetical details at competitive prices. Here, you can trustfully share your idea with a team of professionals, to find the best solution for your concern, as we are not here only to sell a product; but to provide our clients a solution to improve their quality of life and make their dreams real.

## MAKE IT REAL

**emmet** is a world class full-service provider. Regardless of your location, **emmet** dedicates its effort to provide superior surfaces exactly as you wish, right to the point you want. It doesn't matter whether you are looking for a traditional or modern design, we always have something for you. It is our competitive competency to provide full-service to our clients around the globe, from designing process to transportation of the product. Through our strong supply network, agile logistic system and exporting expertise, we are committed to take your order from the factory and deliver it right to your warehouse or any other destination you would prefer.

We also give you the option to have a tailor-made product by designing your artistic ideas on our high-quality ceramics and tiles.

Every single staff is working hard at **emmet**, to make your dreams come true. That's what we call the aim of our brand.

Make it real with **emmet**.

& PACKING SPECIFICATIONS**

## TILES INSTALLATION AND JOINTING

### BEFORE WORK

- Tiles should be used according to their intended purpose
- Before installation, the entire purchased batch of the tiles should be verified with respect to their quality, hue, and caliber in order to make sure that no mistakes occurred when loading the product. To do that, tiles from different cartons should be compared. The buyer should verify if the marking of the caliber and hue on all the packages is the same. After the installation of the tiles, claims regarding those aspects shall not be considered.
- When selecting tiles with visible tonal differences, it is recommended to mix the products from different packages during the installation as those tonal differences are the intended effect.
- When installing the tiles, the instructions found in construction manuals and professional literature should be performed accordingly.
- Tiles installation should be performed by qualified workers.

### BASE SURFACE PREPARATION

- Before beginning tile work, especially when floor heating is to be used, it is very important to visually assess the base surface. Base surface preparation should begin with its thorough cleaning. Floor level must be checked.
- If the surface where the tiles are to be installed is uneven, it must be leveled with a self-leveling mortar compound. If the surface is very uneven, the entire floor must be leveled.
- Next step is to prime the surface base. PriWming liquid should be absorbed by the floor.
- Materials used for the preparation of the base surface with the floor heating should be used according to the manufacturer's instructions. Tile work should always be performed when the floor heating is switched off.

- When installing tiles on the surface with floor heating, it is important to remember to use appropriate surface spacing between independently operating heating areas. It is important due to the thermal expansion of materials. Taking into account temperature fluctuations, the floor should be divided every 9-16 m<sup>2</sup>, if possible. The surface should be divided into square shaped areas as far as possible with the use of edge and peripheral spacing to divide the floor surface from wall surface. Expansion gaps in the layer of installed tiles should be consistent with already existing expansion joints in the surface.

### LAYING TILES

- Installation process should begin with planning, determination of the axis of the installation taking into account spacing, and making a simulation of the final effect by placing the tiles on the floor.
- Ceramic tiles have the right to have a small curvature, which is most frequently observed in long and narrow products. To level any possible differences that may arise during the installation, the tiles should be installed with the maximum offset to the 1/3 of the length of the neighboring tile. This shall allow to reach the intended effect and shall ensure an even floor surface.

- After the planning phase, tiles should be collected and installed on an evenly spread adhesive mortar.
- For large format tiles, it is recommended to use tile leveling systems which significantly improve the visual aspect of the floor as well as allow to level any imperfections resulting from the surface irregularities, tile work shortcomings, or tile curvature.
- The glue should be prepared according to the manufacturer's instructions taking into special account the amount of mixing water, time in which the mortar maintains adequate adhesion, and the fixture time.
- Glue mortar should be spread evenly on the previously prepared base surface. The mortar layer's thickness should comply with the glue manufacturer's instructions. Mortar should be applied with the use of a notched trowel where the notch size is adjusted to the size of the tiles.
- Tiles should be placed and pressed into the applied glue and then slightly moved on the surface to ensure their proper adhesion.
- Tiles should always be glued with the entire surface. Ceramic tiling should form a permanent whole with the surface base (when lightly knocked on, it should not produce a hollow sound).

## JOINTING TILES

- Tiles should always be installed with a joint as tiles laid jointlessly shall form a very compact whole which shall be sensitive to any type of stress. The principal purpose of the joint is to level the stress caused by temperature fluctuations or surface deformations.
- Jointing tiles should be started after verifying that the tiles are completely stuck to the surface base (in the time indicated by the glue's manufacturer).
- When grouting tiles, particularly glass elements with the use of epoxy joints, the time needed for the mixing water to evaporate from the mixed materials should be taken into consideration. If the jointing is performed too soon, the humidity remaining under the material may cause discoloration of glass elements.
- In order to achieve the desired appearance of the ceramic tile work, jointing must be performed according to the grouting instructions found on the joint packaging. Special attention must be paid to the amount of mixing water, fixture time, and the time after which the grout excess must be removed.

- Before jointing the entire ceramic tile work, it is recommended to test the grout on a small fragment (tile fragment) and perform a control cleaning in order to determine the effect of the joint on the type of the tiles used.
- The prepared mixture should be spread with the use of a rubber trowel. Tiles should be jointed in parts measuring no more than 3-4 m<sup>2</sup>. Where horizontal and vertical surfaces meet as well as in places where tiles touch sanitary devices or jambs, elastic material sealing such as, for example, silicone must be used. To avoid making the tiles dirty, the edges may be covered with masking tape. Then, joint is applied. Before the mixture hardens, the tape must be removed.

- For jointing decorative elements, no coarse-grained joint should be used. The metallic surface of ceramic decorative elements is susceptible to scratching, which is why it is recommended to use acrylic, silicone, or other fine-grained (soft) grouts.
- When jointing with the use of the coarse-grained grout, the decorative element surface must be protected with masking tape, for example.
- Cleaning of the jointed surface should be performed according to the mortar manufacturer's instructions. Joint excess should be gently removed from the tile surface making sure fresh joint is not washed off and the surface does not get scratched.
- Impurities on glazed and unglazed tiles caused by different kinds of mortars should be removed with the use of appropriate cleaning agents available on the market and then washed off with water.

## LININGS USE AND MAINTENANCE

- The time after which the installed ceramic tile surface can be used depends on the parameters of the applied glue. Glue manufacturer determines the time after which it reaches its maximum endurance.
- Glazed wall and floor tiles should be washed with cleaning products available on the market and intended for this type of surfaces.
- Regular stoneware tiles care requires cleaning products specifically intended for this type of surfaces, in accordance with the instructions attached to the product.
- Lappato type tiles care requires only products with neutral pH, i.e. 6.5 to 7.5.
- Tiles and decorative elements should not be cleaned with aggressive or coarse-grained liquids or other materials that can damage the surface.
- Chemical agents should be diluted according to the manufacturer's instructions.
- Everyday washing and removal of greasy impurities should be performed with the use of alkaline agents which do not contain gloss polishes that would leave a thin film on the surface.
- To remove tartar from the evaporated water used for everyday washing or removal of impurities left after a careless assembly, acidic products, such as construction chemicals, should be used periodically.
- It is important to remember that snow or ice from the surface of the tiles must not be removed with a sharp tool as the tiles may get easily damaged.

Simple foodstuffs (coca-cola, wine, water etc.) can remove the bright patina. The original surface is more matt.

**emmet** is the start point of a unique dialogue between quality and design. With more than 25 years of remarkable experience in manufacturing and trading, **emmet** provides a wide selection of high-quality artistic tile and ceramic products, as a world-class full-service provider. Regardless of your location, emmet dedicates its effort to provide superior surfaces right to the point you wish. It doesn't matter whether you are looking for a traditional or modern design, we always have something for you.
